KSQL - Introduction

What can you do with KSQL?

KSQL allows you to....

1. Grouping and aggregating on your Kafka Topics

```
SELECT store_id, count(*)  
FROM invoices  
GROUP BY store_id;
```

2. Grouping and aggregating over a time window

```
SELECT store_id, count(*)  
FROM invoices  
WINDOW TUMBLING (SIZE 1 HOUR)  
GROUP BY store_id;
```

KSQL allows you to....

3. Apply Filters

```
SELECT store_id, count(*)  
FROM invoices  
WINDOW TUMBLING (SIZE 1 HOUR)  
WHERE UCASE(locality)='SOUTH BANGALORE'  
GROUP BY store_id;
```

4. Join two Topics

5. Sink the result of your query into another topic
